

★ VELCRO DETACHABLE HINGE!

Aug '81

The Formfac Connection.

The ingenious thing about the Formfac screen is its simplicity.

The Formfac screen is simplicity itself.

It does not pretend to be anything but a screen.

It does not pretend to be a wall and combination furniture at one and the same time.

Its task is to create privacy and a calm working environment, to prevent unwanted observation and to reduce noise.

Bell Touch edges are used to connect Formfac screens.

No technical knowledge or skills and no tools required for assembly.

You simply set up the screens one next to the other.

The Bell Touch edges connect them securely; also serve as hinges to set screens at any angle.

Screens can be joined edge to edge, two, three or four at a corner.

Formfac screens may also be arranged to stand by themselves with or without the Bell Touch edges. Two brown, plastic coated bar stock bases provide excellent stability.

Formfac features an Aluminum Framework to be sturdy, High Density Fiberglas to make it sound-absorbent, and a wide selection of suitable acoustical upholstery materials.

Formfac screens are of one height for ideal acoustical control and visual privacy, screening files, eliminating elbow perching.

Vertical height adjustment to compensate for uneven floors.

Wherever required for stability or layout, a base may be installed in place of the panel glides without ordering any other parts.

Formfac screens are suitable for all types of furnishings, modern and traditional. You use them in offices, exhibitions, schools, libraries, hospitals, clubrooms, studios, reception rooms, restaurants, assembly rooms, universities, and other applications.

Comments on Formfac:

Office manager in open office:

"It's a terrible feeling having your back exposed while you work. Now my working place is not only shutoff from people's view. It also offers the peace and quiet I need to do a good job."

Construction engineer in design office:

"I need somewhere to pin up notices, drawings, pictures, memoslips and so on. At the same time, I need a working place that offers light, space and easy contact with other people."

Bank manager in bank built in 1909:

"There are places one has to live with that were built for other times and other purposes. The screens make the place cosy and provide the partition needed to stand the acoustics. Furthermore, the screens are easy to put on one side, whenever the whole rooms are needed for ceremonious occasions."

Car salesman in showroom:

"We need a lot of space for our show but also some small corners for sales talk and deals. The screens are an excellent solution. You don't need walls all the way up to the ceiling for privacy!"

Switchboard operator in small office:

"I couldn't hear what people on the phone were saying with that typewriter hammering away behind me all the time. The screen is a blessing."

Account executive in advertising agency:

"Nowadays our meetings are just as large or small as they have to be to suit the number of participants. Some of the screens are always there. The rest can easily be added or removed. And it's all done in a minute or two."

Librarian in university library:

"There are a lot of people in the room, and they might put me off, when I'm working. But I'm here to answer their questions and they must know where to find me."

Information director of large company:

"We assembled an exhibition to be shown all over the country. It had to be easily packed and unpacked and easily handled and mounted, with very simple instructions, by people who have never seen it before. Without these wonderful screens this would have been a real problem."

Teacher in training college:

"Groupwork goes much better if the group can work in private, without disturbing the rest of the class."

Restaurant owner in newly-decorated premises:

"As long as we had only a large, open room the place looked gloomy and unpleasant. Now, thanks to the screens we have a lot of cosy corners, and they are gaily colored too."

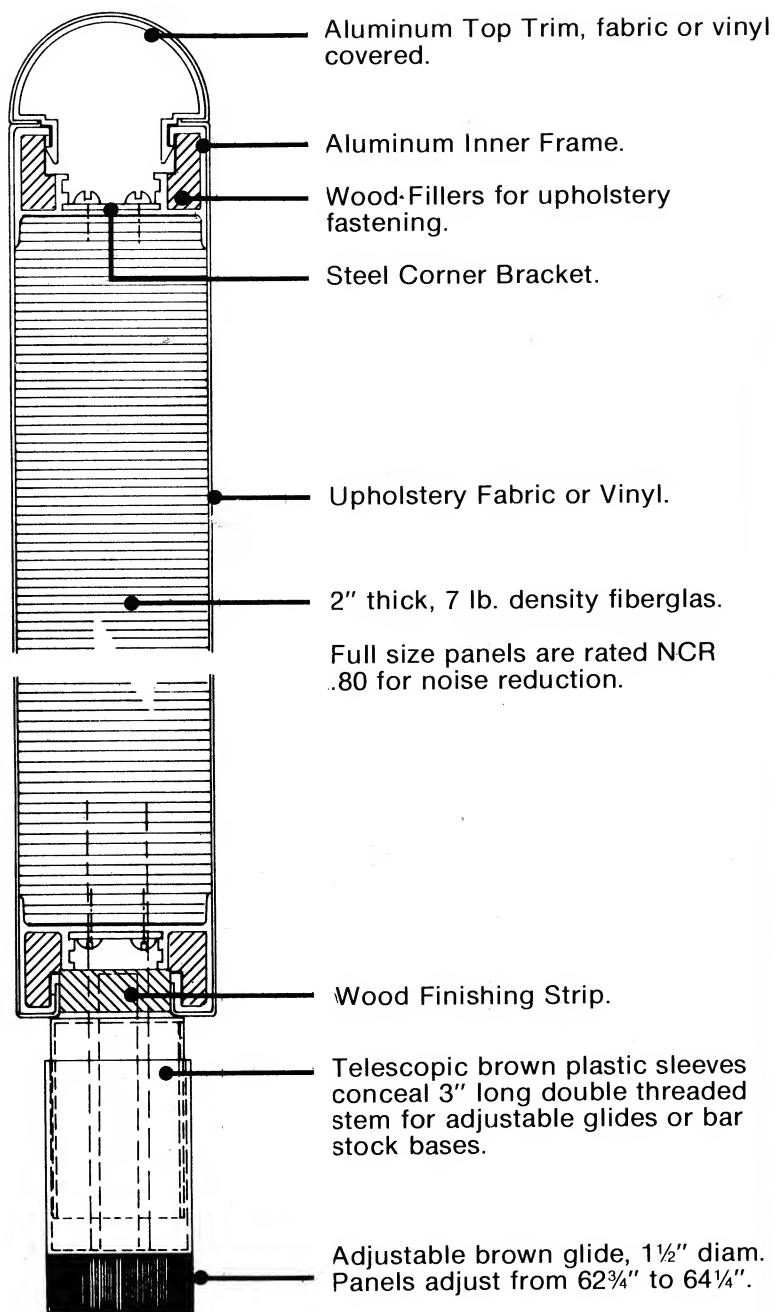

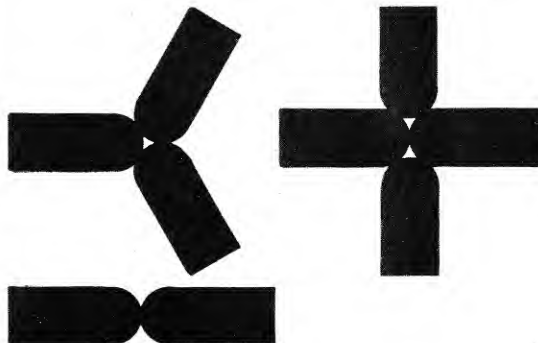

Panel Construction

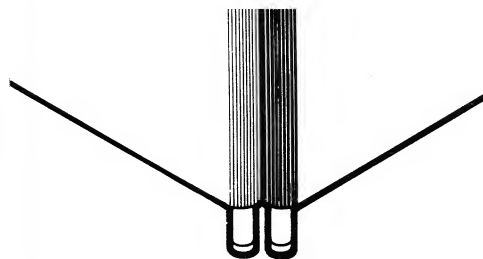

Configurations

Formfac panels can be joined edge to edge in various configurations. Use any combination of soft and hard Bell Touch edges.

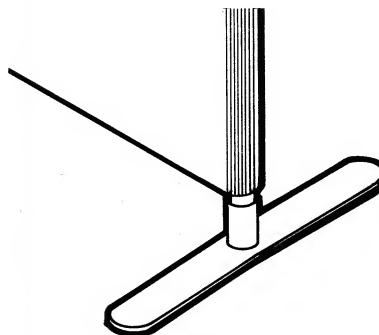

Glides

Panel glides may be interchanged with base without extra parts. No tools required.

Bases

Bar Stock Base rotates to provide 1½" height adjustment. Base screws on to double threaded stem.
